QA Automation Engineer (Pune/Mumbai)(Work From Office)

Pune, Maharashtra

Work Type: Full Time

[Apply Now](#)

Role Overview

We are looking for a **QA Automation Engineer** with strong expertise in **automation testing** to ensure high-quality software delivery across enterprise applications. This role emphasizes an **automation-first mindset**, **CI/CD integration**, and **end-to-end quality ownership across the SDLC**.

Key Responsibilities

- Design, develop, and maintain **robust automation frameworks** for **UI, API, integration, workflow, and end-to-end testing**.
- Automate **acceptance, regression, workflow, and end-to-end test scenarios** aligned with business requirements.
- Integrate automated test suites into **CI/CD pipelines** to enable continuous testing and faster feedback.
- Execute and analyze **performance testing** and ensure performance readiness as a **release gate**.
- Support and govern **security testing** (static, dynamic, and penetration) in collaboration with development teams.
- Perform **cross-browser and cross-device testing** to ensure a consistent user experience.
- Collaborate with **developers, product owners, architects, TPMs, and SMEs** to ensure quality at every stage.
- Design and implement automation frameworks using **design patterns** (Page Object Model, Factory, Facade, Adapter).
- Mentor junior QA engineers and drive **automation best practices and quality standards** across teams.

Required Skills

UI & API Automation

Must Have

- **Strong expertise in UI, API, and End-to-End Automation Testing**
- **Hands-on experience with Selenium**
- **Strong experience with BDD frameworks such as Cucumber**

- **Proficiency in Java and JavaScript**
- **Experience automating business-critical workflows**
- **Working knowledge of White and SWTBot**

Nice to Have

- **Experience with additional UI automation tools such as Sahi and Watir**
- **Experience with cross-browser UI automation strategies**

Integration Testing

Must Have

- **Strong experience in integration testing between dependent systems and services**
- **Hands-on experience with xUnit frameworks (JUnit / TestNG)**
- **Ability to validate service contracts, upstream/downstream integrations, and negative scenarios**
- **Experience working closely with Developers, QA, and TPMs**
- **Experience using Lisa or similar integration testing frameworks**

Nice to Have

- **Exposure to third-party system integration testing**
- **Experience with mocking and stubbing tools**

Workflow Testing

Must Have

- **Experience in workflow-level testing across multiple workstreams**
- **Strong experience with Cucumber for business workflow validation**
- **Ability to design tests from a business process perspective**
- **Experience collaborating with TPMs, SMEs, UX, Architects, and QA/UAT teams**
- **Experience using Lisa for workflow orchestration**

Nice to Have

- **Experience validating workflows with stubbed upstream/downstream dependencies**

CI/CD & DevOps

Must Have

- **Strong experience integrating automation into CI/CD pipelines**
- **Hands-on experience with build and dependency management tools such as Maven and Gradle**
- **Strong understanding of Agile methodologies and continuous testing practices**

Nice to Have

- **Exposure to DevOps-driven quality gates**

Performance Testing

Must Have

- **Strong experience in performance testing of enterprise applications**
- **Hands-on experience with JMeter and Perfecto**
- **Ability to design, execute, and analyze load, stress, and endurance tests**
- **Experience identifying performance bottlenecks and collaborating with developers**

Nice to Have

- **Experience with Apica**
- **Experience integrating performance tests into CI/CD pipelines**

Security Testing

Must Have

- Strong understanding of static and dynamic security testing concepts
- Knowledge of OWASP Top 10 vulnerabilities
- Experience supporting dynamic security testing during iterations under QA governance
- Hands-on experience with Burp Suite or OWASP ZAP

Nice to Have

- Experience participating in penetration testing cycles

Test Data, Messaging & Database Testing

Must Have

- Experience in test data management (Apache POI for Excel, JSON handling)
- Experience with data-driven testing approaches
- Knowledge of database testing using JDBC
- Experience with message queue testing (Azure Service Bus, RabbitMQ)

Nice to Have

- Experience validating event-driven or asynchronous systems

What We Expect

- Strong automation-first mindset over manual execution
- Ability to own quality end to end, not just test cases
- Experience working in enterprise-scale QA environments
- Ability to mentor teams and influence quality culture
